

HAWKEYE

WHITEPAPER

INTRODUCING

Hawkeye is an advanced Solana wallet activity tracker bot designed to notify users about buy and sell transactions within their Solana cryptocurrency wallets. Operating seamlessly on the Telegram platform, Hawkeye keeps users informed in real-time about all wallet activities on the Solana blockchain.

FEATURES

Hawkeye actively monitors users' Solana wallets and sends instant notifications on Telegram whenever a buy or sell transaction occurs. This feature ensures users stay updated on their wallet activities without the need to manually check.

Users can request detailed information about specific transactions within their wallets.

Hawkeye provides transaction details, including transaction ID, date, time, and the assets involved in the transaction.

FEATURES

Hawkeye supports the tracking of multiple Solana wallets within a single Telegram account. Users can seamlessly switch between wallets and receive notifications for each monitored wallet.

Hawkeye is designed with user convenience in mind. Users can interact with the bot using simple and intuitive commands to retrieve information and customize their tracking preferences.
